## 层叠容器

## ViewStack

ViewStack 是层叠容器,在 ViewStack 容器中可以添加多个子项,但只能显示其中的一个。通过设置 selectedIndex 或者 selectedChild 属性,来控制当前应该显示的子项。

首先创建一个专用于显示 ViewStack 的类:

```
class ViewStackDemo extends eui.Group {
    private viewStack:eui.ViewStack;
    public constructor() {
        super();
    }
    protected createChildren():void {
      super.createChildren();
       this.viewStack = new eui.ViewStack();
       var btnA:eui.Button = new eui.Button();
       btnA.label = "egret Button A";
       this.viewStack.addChild( btnA );
       var btnB:eui.Button = new eui.Button();
       btnB.label = "egret Button B";
       this.viewStack.addChild( btnB );
       //设置默认选项
       this.viewStack.selectedIndex = 1;
       //timer控制选项切换
       var timer:egret.Timer = new egret.Timer( 500 );
       timer.addEventListener( egret.TimerEvent.TIMER, this.changeIndexByTimer, thi
s );
       timer.start();
       //show
       this.addChild( this.viewStack );
    }
    private changeIndexByTimer( evt:egret.TimerEvent ):void {
        this.viewStack.selectedIndex = this.viewStack.selectedIndex == 0 ? 1 : 0 ;
    }
}
```

## egret Button B egret Button A

## **TabBar**

ViewStack通常都同时配合导航条使用,这部分内容请参考选项卡 (../../../extension/EUI/dataCollection/tabBar/index.html) 章节
